

Call Center Performance Dashboard

Project Overview

This project focuses on analyzing call center operational performance using Power BI. The dashboard provides insights into customer satisfaction, response efficiency, issue resolution, and agent performance.

Tools Used

- Power BI
- Excel
- DAX

Key Features

- KPI cards for call center metrics
- Agent-wise performance analysis
- Department-wise satisfaction analysis
- Speed of answer vs satisfaction analysis
- Talk duration analysis
- Interactive slicers and filters

Business Insights

- Faster response times improved customer satisfaction.
- Increased waiting time negatively affected customer experience.
- Balanced talk duration resulted in better customer interaction outcomes.
- Certain departments showed comparatively lower satisfaction ratings.
- Efficient issue resolution improved overall call center performance.
